

# Vulnerability Intelligence Manager 2016

Verified vulnerability intelligence and full coverage by Secunia Research at Flexera Software

## Benefits to Your Organization:

- Secunia Research analyzes hundreds of possible vulnerabilities every day. They test, identify and report on the real vulnerabilities.
- Advisories were developed to support the work of security practitioners to secure businesses. They provide detailed, standardized information on vulnerabilities on applications and systems to enable risk assessment and prioritization of mitigation efforts.
- Our customers receive vulnerability intelligence for all assets within their organizations. They can be confident that we will track any commercially available applications or system in their infrastructure for vulnerabilities.

- We entirely support the processes related to software vulnerability management. That means organizations are equipped to fully leverage the vulnerability intelligence provided by Secunia Research to efficiently act on the vulnerabilities that are a threat to their businesses.

## Introduction

Secunia Research at Flexera Software is the world-leading provider of reliable and accurate vulnerability intelligence, helping customers make informed decisions about remediating threats in a timely and cost-effective manner.

Powered by our Secunia Research team, Flexera Software offers coverage of over 50,000 systems and applications, giving you access to the most comprehensive vulnerability intelligence to handle emerging and historic threats.

Vulnerability Intelligence Manager introduces several improvements to make your life easier, including a new and improved user interface for a better look and feel and integration with the Corporate Software Inspector improves assets matching with a full activity log.

Vulnerability Intelligence Manager allows you to define customized filters according to software responsibility and compliance criteria for each of the recipients in your organization. Personalized security alerts are issued to the correct individual whenever a new vulnerability threat that could affect your IT

infrastructure is discovered. With the Vulnerability Intelligence Manager, optimizing your security processes to handle vulnerabilities, and protecting your critical information assets against potential attacks, has never been easier.

## Vulnerability Intelligence Manager

Vulnerability Intelligence Manager is a powerful Software Vulnerability Management solution that provides you with the necessary information to analyze vulnerabilities in your IT infrastructure, enabling you to track and eliminate them easily from a centralized dashboard interface. Vulnerability Intelligence Manager is power-packed with rich features and a friendly and lightning fast user interface. It is extremely customizable, enabling organizations to find the latest vulnerability intelligence immediately, and implement remediation strategies more effectively.

Comprehensive reporting enables accurate assessment of the current state of your IT infrastructure for risk management and compliance purposes, and increased Return on Security Investment (ROSI).

## What Do You Get With Vulnerability Intelligence Manager?

### Verified Intelligence

Secunia Research analyzes hundreds of potential vulnerabilities every day and release advisories for verified vulnerabilities, containing detailed information which is used by customers to assess risk and determine actions to keep their business protected from cybercriminals and hackers.

We call this information intelligence because Secunia Research:

- Eliminates false alerts
- Tests vulnerabilities
- Cross-references sources
- Provides standardize content
- Completes information to enable risk assessment
- Updates existing advisories with new, relevant information

### Advisories

Advisories is the result of the expert work from Secunia Research. Covering over 50,000 applications and systems since 2003, each advisory represents a full picture of the vulnerability in the product, including:

- A unique identifier
- Attack vector (how the vulnerability can be exploited)
- Secunia Research Criticality Rating
- Impact of exploitation (the consequence)
- References to industry standards, such as CVE, CPE and CVSS
- Known exploits of the vulnerability
- Link to patches, description of partial fixes, work-arounds and other mitigation actions
- Additional references when applicable

## How Vulnerability Intelligence Manager Works

### 1: Secunia Research Monitors all Information about Software Vulnerabilities

When a potential software vulnerability is publically disclosed, the Secunia Research team get to work verifying that it is in fact a vulnerability. Once confirmed, Secunia Research analyzes the severity and what software might be affected.

Then, a standardized and 100% vendor independent Advisory is written for the vulnerability, detailing attack vector, criticality rating, impact and solution.

### 2: Flexera Software Customers Receive Software Vulnerability Intelligence

The Advisory is uploaded to the Vulnerability Intelligence Manager, and adapted intelligence feeds are delivered to Flexera Software's customers, based on customized pre-configured filters, to ensure the right groups of people are alerted whenever a new vulnerability that could affect your IT infrastructure is discovered. You can customize filters according to e.g. software responsibility, compliance criteria or geography for each of the recipients in your organization.

### 3: Security Alerts Go Out and Tickets are Created

Personalized security alerts – via email or SMS - are then issued in real-time to the correct individual in your organization.

A ticket will be created when a relevant Advisory is issued. The ticket is in effect a Vulnerability Intelligence Manager-based interface and enables your organization to manage the vulnerability based on the current state of all products, vendors, and asset lists.

### 4: Manage Vulnerability Intelligence based on Compliance Policies

Throughout the vulnerability management process you are able to generate reports. You can also configure internal compliance policy rules based on the compliance policies relevant to your organization.

## Stay Secure!

The backbone and greatest strength of Flexera Software's Software Vulnerability Management portfolio is the internationally acclaimed Secunia Research team, who deliver first-class vulnerability research and verification, covering more than 50,000 systems and applications.

We are determined to ensure that Flexera Software's offerings are the best in the market, and that we maintain our position as the number one provider of reliable and relevant Vulnerability Intelligence.

Our focus on usability and ongoing improvement to the range of Software Vulnerability Management products and offerings is key to ensuring that the Vulnerability Intelligence and knowledge we bring to you is put to good use within your organization.

Our customers can rest assured that they are partnering with an organization that is leading the way in the Software Vulnerability Management space, and that they can rely on Flexera Software to continuously develop cutting-edge products.

### Secunia Research at Flexera Software

In September 2015, Flexera Software acquired Secunia, adding Secunia's Software Vulnerability Management solutions to complement Flexera Software's Software License Optimization

and Application Readiness solutions. Under Flexera Software, Secunia Research continues to perform vulnerability verification, issue Advisories and publish data on the global vulnerability landscape.

### About Flexera Software

Flexera Software helps application producers and enterprises manage application usage and increase the value they derive from their software. Our next-generation software licensing, compliance, security and installation solutions are essential to ensure continuous licensing compliance, optimize software investments and future-proof businesses against the risks and costs of constantly changing technology. Over 80,000 customers turn to Flexera Software as a trusted and neutral source for the knowledge and expertise we have gained as the marketplace leader for over 25 years and for the automation and intelligence designed into our products.
